# WEST FORT COLLINS WD 2025 Drinking Water Quality Report Covering Data For Calendar Year 2024

Public Water System ID: C00135290

Esta es información importante. Si no la pueden leer, necesitan que alguien se la traduzca.

We are pleased to present to you this year's water quality report. Our constant goal is to provide you with a safe and dependable supply of drinking water. Please contact DOUG BIGGE at 970-484-4881 with any questions or for public participation opportunities that may affect water quality. Please see the water quality data from our wholesale system(s) (either attached or included in this report) for additional information about your drinking water.

#### General Information

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (1-800-426-4791) or by visiting <a href="mailto:epa.gov/ground-water-and-drinking-water">epa.gov/ground-water-and-drinking-water</a>.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV-AIDS or other immune system disorders, some elderly, and infants can be particularly at risk of infections. These people should seek advice about drinking water from their health care providers. For more information about contaminants and potential health effects, or to receive a copy of the U.S. Environmental Protection Agency (EPA) and the U.S. Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and microbiological contaminants call the EPA Safe Drinking Water Hotline at (1-800-426-4791).

#### **Contaminant Information**

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- **Microbial contaminants:** viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- **Inorganic contaminants:** salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- **Pesticides and herbicides:** may come from a variety of sources, such as agriculture, urban storm water runoff, and residential uses.
- Radioactive contaminants: can be naturally occurring or be the result of oil and gas production and mining activities.
- Organic chemical contaminants: including synthetic and volatile organic chemicals, which are byproducts
  of industrial processes and petroleum production, and also may come from gas stations, urban storm water
  runoff, and septic systems.

In order to ensure that tap water is safe to drink, the Colorado Department of Public Health and Environment prescribes regulations limiting the amount of certain contaminants in water provided by public water systems. The Food and Drug Administration regulations establish limits for contaminants in bottled water that must provide the same protection for public health.

#### Lead in Drinking Water

Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formula-fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in home plumbing. We are responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home. Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time.

You can help protect yourself and your family by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly.

Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for a longer period. If you are concerned about lead in your water and wish to have your water tested, contact DOUG BIGGE at 970-484-4881. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <a href="mailto:epa.gov/safewater/lead">epa.gov/safewater/lead</a>. Service Line Inventory

New state and federal laws require us to inventory all water service lines in our service area to classify the material. A service line is the underground pipe that carries water from the water main, likely in the street, into your home or building. If you would like to view a copy of our service line inventory or have questions about the material of your service line, contact DOUG BIGGE at 970-484-4881.

Source Water Assessment and Protection (SWAP)

The Colorado Department of Public Health and Environment may have provided us with a Source Water Assessment Report for our water supply. For general information or to obtain a copy of the report please visit <a href="wqcdcompliance.com/ccr">wqcdcompliance.com/ccr</a>. The report is located under "Guidance: Source Water Assessment Reports". Search the table using our system name or ID, or by contacting DOUG BIGGE at 970-484-4881. The Source Water Assessment Report provides a screening-level evaluation of potential contamination that *could* occur. It *does not* mean that the contamination *has or will* occur. We can use this information to evaluate the need to improve our current water treatment capabilities and prepare for future contamination threats. This can help us ensure that quality finished water is delivered to your homes. In addition, the source water assessment results provide a starting point for developing a source water protection plan. Potential sources of contamination in our source water area are listed below. Please contact us to learn more about what you can do to help protect your drinking water sources, any questions about the Drinking Water Quality Report, to learn more about our system, or to attend scheduled public meetings, which are held on the 2nd Monday of every month at 12:00pm at the WFCWD office located at 2711 N Overland Trail Laporte, CO 80535. The mailing address is PO Box 426, Laporte, CO 80535. We want you, our valued customers, to be informed about the services we provide and the quality water we deliver to you every day.

# **Our Water Sources**

Sources (Water Type - Source Type)	Potential Source(s) of Contamination
GOAT HILL MASTER METER (Surface Water-Consecutive Connection)	See City of Fort Collins Source water Assessment Protection Report PWSID# CO0135291
WATSON LAKE MASTER METER (Surface Water-Consecutive Connection)	See City of Fort Collins Source water Assessment Protection Report PWSID# CO0135291
PURCHASED SW FROM FT COLLINS 135291 (Surface Water- Consecutive Connection)	See City of Fort Collins Source water Assessment Protection Report PWSID# CO0135291

#### Terms and Abbreviations

- Maximum Contaminant Level (MCL) The highest level of a contaminant allowed in drinking water.
- Treatment Technique (TT) A required process intended to reduce the level of a contaminant in drinking water.
- Health-Based A violation of either a MCL or TT.
- Non-Health-Based A violation that is not a MCL or TT.
- Action Level (AL) The concentration of a contaminant which, if exceeded, triggers treatment and other regulatory requirements.
- Maximum Residual Disinfectant Level (MRDL) The highest level of a
  disinfectant allowed in drinking water. There is convincing evidence that
  addition of a disinfectant is necessary for control of microbial
  contaminants.
- Maximum Contaminant Level Goal (MCLG) The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- Maximum Residual Disinfectant Level Goal (MRDLG) The level of a
  drinking water disinfectant, below which there is no known or expected
  risk to health. MRDLGs do not reflect the benefits of the use of
  disinfectants to control microbial contaminants.
- Violation (No Abbreviation) Failure to meet a Colorado Primary Drinking Water Regulation.
- Formal Enforcement Action (No Abbreviation) Escalated action taken by the State (due to the risk to public health, or number or severity of violations) to bring a non-compliant water system back into compliance.
- Variance and Exemptions (V/E) Department permission not to meet a MCL or treatment technique under certain conditions.
- Gross Alpha (No Abbreviation) Gross alpha particle activity compliance value. It includes radium-226, but excludes radon 222, and uranium.

- Picocuries per liter (pCi/L) Measure of the radioactivity in water.
- Nephelometric Turbidity Unit (NTU) Measure of the clarity or cloudiness of water. Turbidity in excess of 5 NTU is just noticeable to the typical person.
- Compliance Value (No Abbreviation) Single or calculated value used to determine if regulatory contaminant level (e.g. MCL) is met. Examples of calculated values are the 90<sup>th</sup> Percentile, Running Annual Average (RAA) and Locational Running Annual Average (LRAA).
- Average (x-bar) Typical value.
- Range (R) Lowest value to the highest value.
- Sample Size (n) Number or count of values (i.e. number of water samples collected).
- Parts per million = Milligrams per liter (ppm = mg/L) One part per million corresponds to one minute in two years or a single penny in \$10,000.
- Parts per billion = Micrograms per liter (ppb = ug/L) One part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.
- Not Applicable (N/A) Does not apply or not available.
- Level 1 Assessment A study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.
- Level 2 Assessment A very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

# **Detected Contaminants**

WEST FORT COLLINS WD routinely monitors for contaminants in your drinking water according to Federal and State laws. The following table(s) show all detections found in the period of January 1 to December 31, 2024 unless otherwise noted. The State of Colorado requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. Therefore, some of our data, though representative, may be more than one-year-old. Violations and Formal Enforcement Actions, if any, are reported in the next section of this report.

**Note:** Only detected contaminants sampled within the last 5 years appear in this report. If no tables appear in this section, then no contaminants were detected in the last round of monitoring.

WEST FORT COLLINS WD, PWS ID: CO0135290

# Disinfectants Sampled in the Distribution System

TT Requirement: At least 95% of samples per period (month or quarter) must be at least 0.2 ppm OR

If sample size is less than 40 no more than 1 sample is below 0.2 ppm

Typical Sources: Water additive used to control microbes

Disinfectant Name	Time Period	Results	Number of Samples Below Level	Sample Size	TT Violation	MRDL
Chlorine	December, 2024	Lowest period percentage of samples meeting TT requirement: 100%	0	4	No	4.0 ppm

# **Monitoring Results**

PFAS and Lithium: The majority of public water suppliers, including, West Fort Collins Water District, are subject to the requirements of the Fifth Unregulated Contaminant Monitoring Rule (UCMR 5) published on December 27, 2021 (86 FR 73131). UCMR 5 requires many water suppliers to collect drinking water samples for the analysis of 29 per- and polyfluoroalkyl substances (PFAS) and lithium during a 12-month period between 2023 and 2025. Starting in 2024 there are new PFAS and Lithium Testing being performed per the UCMR 5 testing. West Fort Collins Water District tested quarterly in 2024 for the required contaminants, and all tests determined NO contaminants (29 per- and polyfluoroalkyl substances (PFAS) and lithium) above the detection limit. More information can be requested by calling 970-484-4881.

Violations, Significant Deficiencies, and Formal Enforcement Actions

No Violations or Formal Enforcement Actions

# City of Fort Collins 2025 Drinking Water Quality Report Covering Data For Calendar Year 2024

Public Water System ID: C00135291

Esta es información importante. Si no la pueden leer, necesitan que alguien se la traduzca.

We are pleased to present to you this year's water quality report. Our constant goal is to provide you with a safe and dependable supply of drinking water. Please contact GREGG STONECIPHER at 970-217-3514 with any questions or for public participation opportunities that may affect water quality. Our water treatment facility produces nearly all the water it distributes; however, customers may occasionally receive a blend of water from Fort Collins Utilities and Fort Collins Loveland Water District (FCLWD). FCLWD and City of Fort Collins detected the same contaminants. To view FCLWD report visit https://fclwd.com/.

# General Information

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (1-800-426-4791) or by visiting <a href="mailto:epa.gov/ground-water-and-drinking-water">epa.gov/ground-water-and-drinking-water</a>.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV-AIDS or other immune system disorders, some elderly, and infants can be particularly at risk of infections. These people should seek advice about drinking water from their health care providers. For more information about contaminants and potential health effects, or to receive a copy of the U.S. Environmental Protection Agency (EPA) and the U.S. Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and microbiological contaminants call the EPA Safe Drinking Water Hotline at (1-800-426-4791).

#### **Contaminant Information**

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- **Microbial contaminants:** viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- **Inorganic contaminants:** salts and metals, which can be naturally-occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

FT COLLINS CITY OF, PWS ID: CO0135291 2025 CCR Page 1 of 9

- Pesticides and herbicides: may come from a variety of sources, such as agriculture, urban storm water runoff, and residential uses.
- Radioactive contaminants: can be naturally occurring or be the result of oil and gas production and mining activities.
- Organic chemical contaminants: including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and also may come from gas stations, urban storm water runoff, and septic systems.

In order to ensure that tap water is safe to drink, the Colorado Department of Public Health and Environment prescribes regulations limiting the amount of certain contaminants in water provided by public water systems. The Food and Drug Administration regulations establish limits for contaminants in bottled water that must provide the same protection for public health.

# Lead in Drinking Water

Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formula-fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in home plumbing. We are responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home. Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time.

You can help protect yourself and your family by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly.

Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for a longer period. If you are concerned about lead in your water and wish to have your water tested, contact Joel Nolte at 970-221-6863. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <a href="mailto:epa.gov/safewater/lead">epa.gov/safewater/lead</a>.

# Service Line Inventory

New state and federal laws require us to inventory all water service lines in our service area to classify the material. A service line is the underground pipe that carries water from the water main, likely in the street, into your home or building. If you would like to view a copy of our service line inventory or have questions about the material of your service line, contact Martin Shaffer at 970-416-2165.

FT COLLINS CITY OF, PWS ID: CO0135291 2025 CCR Page 2 of 9

# Source Water Assessment and Protection (SWAP)

The City of Fort Collins' Source Water Protection Plan (SWPP) was completed in 2016. The SWPP identifies and prioritizes major pollution threats to our water sources and identifies key protection or mitigation strategies. The threat of large-scale catastrophic wildfires has been identified as the highest priority threat to our source water quality and drinking water infrastructure; historical mines and flooding are a moderate priority. Utilities began working closely with the Coalition for the Poudre River Watershed (CPRW) and other stakeholders to improve the health and resiliency of the Poudre River following the High Park Fire of 2012. CPRW is leading the Cameron Peak Wildfire local recovery group, including identifying priority restoration areas and projects aimed at protecting our source water quality. Please contact us to learn more about what you can do to help protect your drinking water sources, any questions about the Drinking Water Quality Report, to learn more about our system, or to attend scheduled public meetings. We want you, our valued customers, to be informed about the services we provide and the quality water we deliver to you every day.

# **Our Water Sources**

Sources (Water Type - Source Type)	Potential Source(s) of Contamination
PURCHASED FROM CO0135292 Fort Collins Loveland Water District (Surface Water- Consecutive Connection) PLEASANT VALLEY INTAKE (Surface Water- Intake) POUDRE RIVER INTAKE (Surface Water-Intake) HORSETOOTH RESERVOIR INTAKE (Surface Water-Intake)	See <u>City of Fort Collins' Source Water</u> <u>Protection Plan</u> or contact Gregg  Stonecipher at 970-217-3514

# Terms and Abbreviations

- Maximum Contaminant Level (MCL) The highest level of a contaminant allowed in drinking water.
- Treatment Technique (TT) A required process intended to reduce the level of a contaminant in drinking water.
- Health-Based A violation of either a MCL or TT.
- Non-Health-Based A violation that is not a MCL or TT.
- Action Level (AL) The concentration of a contaminant which, if exceeded, triggers treatment and other regulatory requirements.
- Maximum Residual Disinfectant Level (MRDL) The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- Maximum Contaminant Level Goal (MCLG) The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

FT COLLINS CITY OF, PWS ID: CO0135291 2025 CCR Page 3 of 9

- Maximum Residual Disinfectant Level Goal (MRDLG) The level of a drinking water disinfectant, below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- **Violation (No Abbreviation)** Failure to meet a Colorado Primary Drinking Water Regulation.
- **Nephelometric Turbidity Unit (NTU)** Measure of the clarity or cloudiness of water. Turbidity in excess of 5 NTU is just noticeable to the typical person.
- Compliance Value (No Abbreviation) Single or calculated value used to determine if regulatory contaminant level (e.g. MCL) is met. Examples of calculated values are the 90<sup>th</sup> Percentile, Running Annual Average (RAA) and Locational Running Annual Average (LRAA).
- Average (x-bar) Typical value.
- Range (R) Lowest value to the highest value.
- Sample Size (n) Number or count of values (i.e. number of water samples collected).
- Parts per million = Milligrams per liter (ppm = mg/L) One part per million corresponds to one minute in two years or a single penny in \$10,000.
- Parts per billion = Micrograms per liter (ppb = ug/L) One part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.
- Non-Detect (ND) = Analytical sample where the concentration is deemed lower than could be detected using the approved testing method
- Not Applicable (N/A) Does not apply or not available.

#### **Detected Contaminants**

City of Fort Collins routinely monitors for contaminants in your drinking water according to Federal and State laws. The following table(s) show all detections found in the period of January 1 to December 31, 2024 unless otherwise noted. The State of Colorado requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. Therefore, some of our data, though representative, may be more than one-year-old. Violations and Formal Enforcement Actions, if any, are reported in the next section of this report.

**Note:** Only detected contaminants sampled within the last 5 years appear in this report. If no tables appear in this section, then no contaminants were detected in the last round of monitoring.

FT COLLINS CITY OF, PWS ID: CO0135291 2025 CCR Page 4 of 9

# Disinfectants Sampled in the Distribution System

TT Requirement: At least 95% of samples per period (month or quarter) must be at least 0.2 ppm

# Typical Sources: Water additive used to control microbes

Disinfectant Name	Time Period	Results	Number of Samples Below Level	Sample Size	TT Violation	MRDL
Chlorine	December, 2024	Lowest period percentage of samples meeting TT requirement: 100%	0	125	No	4.0 ppm

# Lead and Copper Sampled in the Distribution System Lead and Copper Individual Sample Results

Contaminant Name	Time Period	Tap Sample Range Low - High	90 <sup>th</sup> Percentile	Sample Size	Unit of Measure	90 <sup>th</sup> Percentile AL	Sample Sites Above AL	90 <sup>th</sup> Percentile AL Exceedance	Typical Sources
Copper	07/13/ 2024 to 09/18/ 2024	0.00618 to 0.249	0.1	55	ppm	1.3	0	No	Corrosion of household plumbing systems; Erosion of natural deposits
Lead	07/13/ 2024 to 09/18/ 2024	0 to 6.14	2.8	55	ppb	15	0	No	Corrosion of household plumbing systems; Erosion of natural deposits

	Disinfection Byproducts Sampled in the Distribution System											
Name	Year	Average	Range Low - High	Sample Size	Unit of Measure	MCL	MCLG	MCL Violation	Typical Sources			
Total Haloacetic Acids (HAA5)	2024	24.68	12.3 to 42.1	32	ppb	60	N/A	No	Byproduct of drinking water disinfection			
Total Trihalometha nes (TTHM)	2024	27.32	15.8 to 38.3	32	ppb	80	N/A	No	Byproduct of drinking water disinfection			
Chlorite	2024	0.31	0.21 to 0.4	12	ppb	1.0	.8	No	Byproduct of drinking water disinfection			

Total Organic Carbon (Disinfection Byproducts Precursor) Removal Ratio of Raw and Finished Water										
Contaminant Name	Year	Average	Range Low - High	Sample Size	Unit of Measure	TT Minimum Ratio	TT Violation	Typical Sources		
Total Organic Carbon Ratio	2024	1.33	1.12 to 1.47	12	Ratio	1.00	No	Naturally present in the environment		

<sup>\*</sup>If minimum ratio not met and no violation identified then the system achieved compliance using alternative criteria.

Summary of Turbidity Sampled at the Entry Point to the Distribution System											
Contaminant Name	Sample Date										
Turbidity	Date/Month: May	<b>Highest single</b> measurement: 0.13 NTU	Maximum 1 NTU for any single measurement	No	Soil Runoff						
Turbidity	Month: Dec	Lowest monthly percentage of samples meeting TT requirement for our technology: 100 %	In any month, at least 95% of samples must be less than 0.3 NTU	No	Soil Runoff						

	Inorganic Contaminants Sampled at the Entry Point to the Distribution System											
Contaminant Name	Year	Average	Range Low - High	Sample Size	Unit of Measure	MCL	MCLG	MCL Violation	Typical Sources			
Barium	2024	0.02	0.01 to 0.02	4	ppm	2	2	No	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits			

	Inorgan	ic Contamin	ants Sampled at	the Entry	Point to th	ne Disti	ribution	System	
Contaminant Name	Year	Average	Range Low - High	Sample Size	Unit of Measure	MCL	MCLG	MCL Violation	Typical Sources
Fluoride	2024	0.6	0.54 to 0.71	23	ppm	4	4	No	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
Nitrate	2024	0.09	ND to 0.18	13	ppm	10	10	No	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits

Secondary Contaminants\*\*

<sup>\*\*</sup>Secondary standards are non-enforceable guidelines for contaminants that may cause cosmetic effects (such as skin, or tooth discoloration) or aesthetic effects (such as taste, odor, or color) in drinking water

Contaminant Name	Year	Average	Range Low - High	Sample Size	Unit of Measure	Secondary Standard
Sodium	2024	3.48	2.76 to 4.12	13	ppm	N/A

# Violations, Significant Deficiencies, and Formal Enforcement Actions

# Non-Health-Based Violations

These violations do not usually mean that there was a problem with the water quality. If there had been, we would have notified you immediately. We reported the sample result after the due date.

Name	Description	Time Period
TURBIDITY	FAILURE TO MONITOR AND/OR REPORT	07/01/2024 - 07/31/2024
CHLORINE	FAILURE TO MONITOR AND/OR REPORT	07/01/2024 - 07/31/2024

# **Additional Violation Information**

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

What Happened, Steps to prevent reoccurrence:

Monitoring of turbidity and chlorine happens multiple times daily, and the results are submitted to Colorado Dept of Public Health and Environment monthly. The report is due by the 10<sup>th</sup> of the following month. The July 2024 report was submitted on Aug 12, 2024, 2 days after the deadline. Internal processes were evaluated and improved to ensure this does not happen again. For questions, please reach out to Gregg Stonecipher 970-221-6692.

FT COLLINS CITY OF, PWS ID: CO0135291
